

Better Performance *and* MPG?

700-foot Slalom

Before-stock

After-with Eibach

Eibach *Pro-Kit* springs: One simple improvement = A new world of performance.

Is there one single, easy modification that can simply transform your car? That can turn it from a standard sedan into a true performance machine—in just a couple hours?

The secret? Eibach's legendary *Pro-Kit* performance springs.

Don't take our word for it. Check out the results, obtained in impartial, independent testing*, that detail the incredible performance gains achieved by simply installing the Eibach *Pro-Kit*.

The *Pro-Kit* performance springs didn't just improve slalom, skid-pad and road-course performance—they transformed the test-subject Honda Accord in virtually every aspect of performance and handling.

The combination of progressive spring rates and a lower center of gravity reduced front-end-dive, improving all-out braking performance. It reduced weight transfer in acceleration, improving 0-to-60 times. And the lowered stance reduced aerodynamic drag, dramatically increasing top speed and fuel mileage as well.

Test Data	Stock	With Eibach <i>Pro-Kit</i>	Why?
Top Speed	119 mph	130mph-plus (governed)	Reduced aero drag
700-foot Slalom	51.9 mph	55.9 mph	Reduced roll, better steering response
Braking 80-0 mph	182 feet	171 feet	Reduced dive
Lateral g (200 ft skid pad)	.72 g	.78 g	Reduced roll
Average Test MPG (high-performance testing/driving)	16.05 mpg	19.15 mpg	Reduced aero drag
Acceleration 0-60 mph	9.51 sec. avg.	9.39 sec. avg.	Reduced weight transfer
Road Course Lap Times (Streets of Willow Springs)	1: 27.80	1: 20.08	All of the above

* Your results may vary. Testing and results certified by TestPilots Independent Testing Services™. 2007 Honda Accord LX, tested at Willow Springs International Raceway, 12/17/07-12/19/07.

The numbers are impressive—but they don't tell the whole story. The Accord became much more rewarding to drive, with better steering feel and response, enhanced cornering speed, more secure braking and impressive high-speed stability, all with a smooth, comfortable ride. Plus the improved aesthetics of its lower, more aggressive stance.

If Eibach *Pro-Kit* Springs can do all this for a popular, base-level sedan—just imagine what they can do for your personal street machine. Available for most popular cars, trucks and SUV's.
